# Tests with text, items, equations, and figures

# The first frame: text

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

# The First Frame: equation

# The second frame: items

- First item in a list
- Second item in a list
- Third item in a list

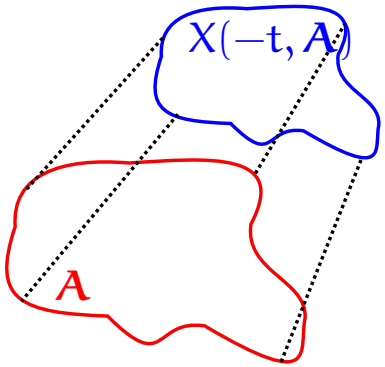
# The third frame: numbered items

1. First item in a list
2. Second item in a list
3. Third item in a list
4. Fourth item in a list
5. Fifth item in a list

# The fourth frame: description list

First item in a list
Second item in a list

# The Second Frame: a figure



# Tests with boxes

# Without shadows

## A test

This is an equation

$$\int_{X(t,\mathbf{Z})} \rho \, dx - \int_{\mathbf{Z}} = \int_0^t \int_{X(s,\mathbf{Z})} \nabla(\rho f)(x) \, dx$$

This is a tcolorbox.

# Lifted shadows

This is a tcolorbox.

**Another shadow**

This is a tcolorbox.

$$\frac{dx}{dt} = f(x)$$

**A test**

Test.

# Midday shadows

This is a tcolorbox.

**Another shadow**

This is a tcolorbox.

# Small boxes with midday, and lifted shadows

Test.

Test.

Test.

Test.
